

ONLINE SERVICE REPORTS For Water Treatment Professionals

WHAT IS IT?

T3-Web Reports™ is a web based application designed to reduce the time and paperwork water treatment professionals use to record and document service visits.

T3-Web Reports uses several built-in tools that output professional looking, high quality service reports. It also helps to maintain a coherent, easy to follow call history.

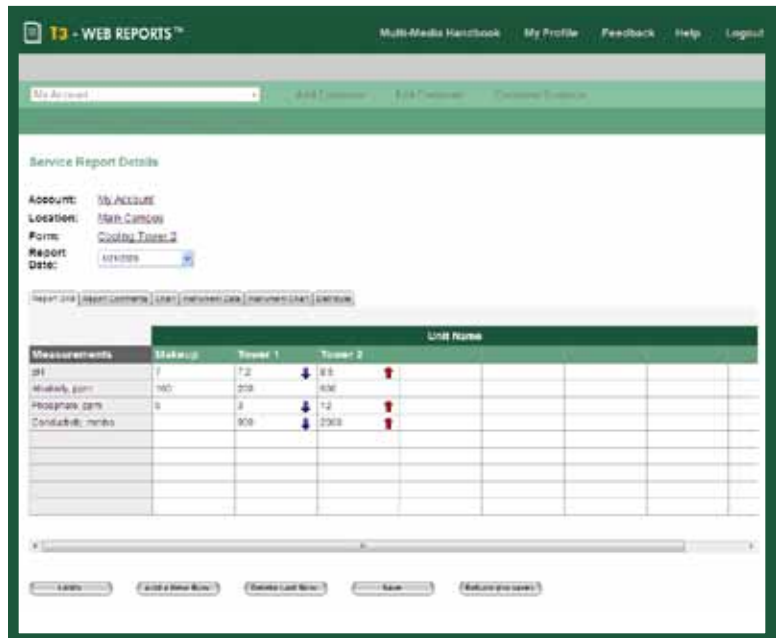

FEATURES

Put All of Your Customer / Contact Information in One Place

- With a simple interface, customer and contact information to be maintained for all customers
- Unlimited number of customers can be added

Service Reports Document Plant Visits

- A new service report starts with the template you created and several additional tabs
- Comments – using an internal word processor with corrective actions automatically dropped in when out-of-limit or warning values are exceeded
- Graphs – add up to four graphs, with trend lines to the report
- Instrument file – if present, a table of data will be available to view or graph
- Out-of-limit and warning values are flagged with arrows and colors. Cell details, including corrective actions, are available at the click of a button
- Select the components to include in the final report - filled in template, graph, comments, out-of-limit summaries and, if present, instrument summaries and graphs

Service Reports Document Plant Visits (con't)

- Output is of the highest quality, and is in a pdf format that makes for easy emailing
- An internal email manager allows your reports to be sent to anyone on your distribution list

Graph Data

- Generate time series graphs for up to four points being recorded, all on one graph or stacked
- Add statistically derived trend lines
- Add lines for upper and lower limits

Partner With Your Customers

- Create templates that your customers can use as their log sheets, with the same ability to set limits and warning levels and actions
- All of the service reports that you or your customers create are available to both, with editing limited to the "owner" of the template

Multi-Media Handbook (MMH) Online

- MMH is the most widely used desktop water treatment reference on the market, and is now integrated into T3-Web Reports
- Intended for water treatment professionals for training, reference and proposal generation
- Contains two complete water treatment manuals, including the AWT Technical Reference and Training Manual, and more are planned
- 18 water treatment specific calculations are built in, with high quality pdf output for each
